

1. Idea

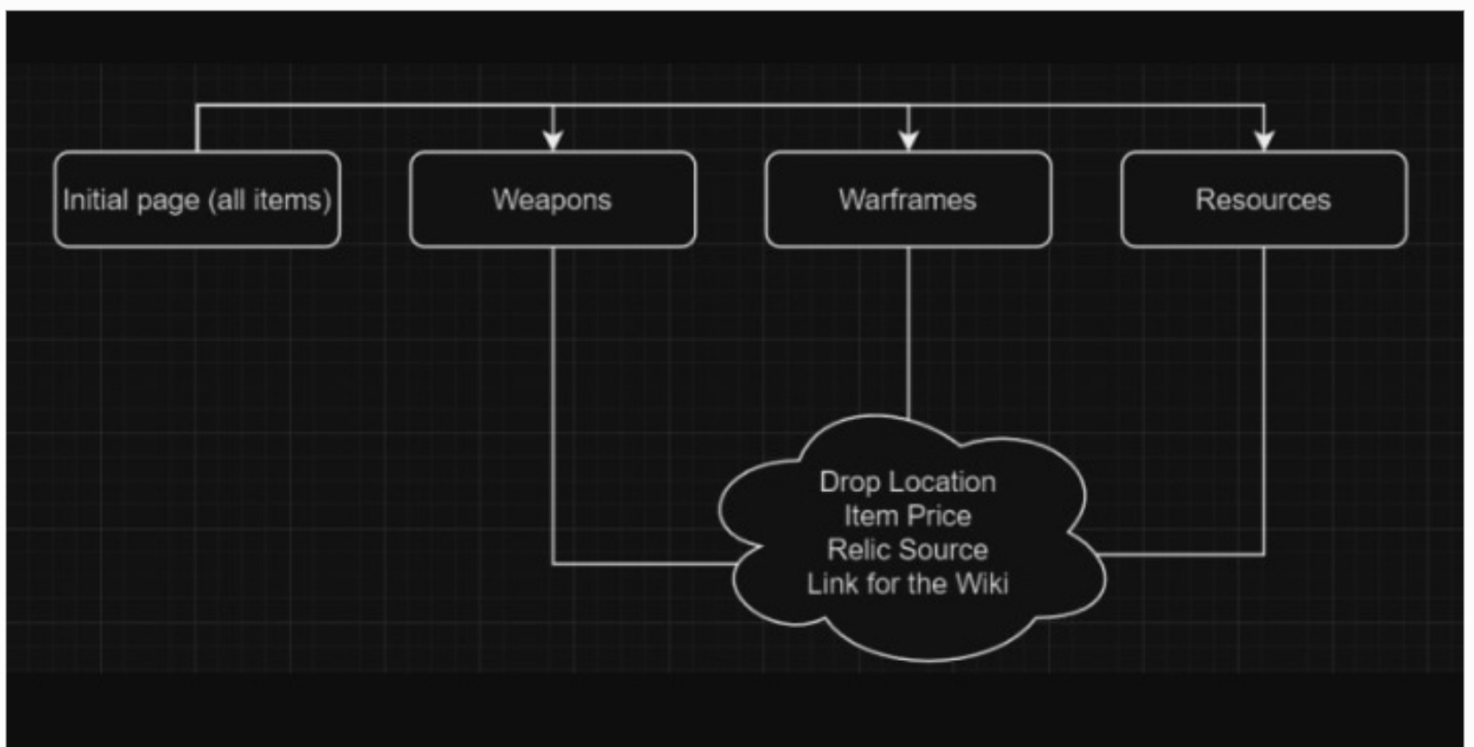

Create a problem statement then write the solution. Convert the solution to one line.

Flows:
User Flow Diagram
Data Flow Diagram

2. The planning:

Write a basic work-flow of the app

Draw **flows, databases, pages, start creating** and don't have fear of making some mistakes. Don't forget to look into references too, they can give you a lot of inspiration!

3. The Refinement:

Create a UI/UX mockup, decide on the scope of the project and gather everything needed to implement the said scope like what APIs would be used what are the services that would be used. Fine tune the flow of the app.

4. The Code: choose a stack and start coding.

5. Release: release the thing
